

RISHAB SIKKA

Backend Developer · Go · Node.js · Microservices
+91 7021828796 | sikka.rishab@gmail.com | [LinkedIn](#) | [LeetCode](#)

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, GoLang, C++, SQL

Backend & Frameworks: Node.js, Express.js, Fiber, REST APIs, Microservices, Event-Driven Architecture

Messaging Systems: Apache Kafka, GCP Pub/Sub

Databases & Caching: PostgreSQL, MongoDB, Redis

DevOps & Tools: Docker, Git, GitHub, CI/CD, Linux/Unix

Concepts: LLD/HLD, OOP, SOLID Principles, Agile/SDLC, Networking & OS Fundamentals

PROFESSIONAL EXPERIENCE

Software Engineer — Wits Innovation Labs May 2025 – Present

Project: National Pension Scheme (NPS) | GoLang · PostgreSQL · REST APIs

- Led backend development of subscriber onboarding flows (Individual, Minor, Corporate, Assisted), driving design decisions and modular SOLID-based architecture.
- Contributed to HLD and service decomposition, data flow, and integration patterns across Aadhaar, FATCA, nominee, and banking modules.
- Built OTP-based authentication service with rate limiting and failure handling for secure multi-step verification.
- Implemented PRAN generation APIs with idempotency and retry mechanisms, achieving 99.9% reliability in external service interactions.

Project: Saleor — ONDC Platform | TypeScript · Node.js · Kafka · Razorpay · Microservices

- Led migration to event-driven architecture, replacing HTTP polling with Kafka-based event streaming, reducing latency by ~20–40%.
- Contributed to HLD for inter-service communication using Kafka, defining topics, partitions, and consumer groups to improve scalability and fault tolerance.
- Built resilient notification service using Kafka with retry, dead-letter queues, and consumer offset management for reliable async processing.
- Integrated Razorpay with complete payment lifecycle (callbacks, fallback, refunds).

Software Development Engineer — Jio Platforms Limited Jan 2024 – May 2025

TypeScript · Node.js · RESTful APIs · JWT · MongoDB · Redis · Microservices

- Built extensible payment orchestration module using Strategy Pattern, enabling seamless multi-gateway integration.
- Implemented Redis-based rate limiting, handling 10K+ RPS bursts while preventing API abuse during peak traffic.
- Optimized JWT authentication and RBAC middleware, reducing auth-related latency by ~15–25% and improving security posture.

OPEN SOURCE

@rishabsikka/rate-limiter — Published NPM Package

TypeScript · Node.js · Redis · In-Memory Storage | npmjs.com/package/@rishabsikka/rate-limiter

- Supports multiple rate limiting strategies: Fixed Window, Token Bucket, and Leaky Bucket.
- Works with both in-memory storage for local development and Redis for distributed/multi-instance deployments.
- Simple factory-based API for creating reusable rate limiter instances with configurable policies.
- Framework-agnostic design compatible with Express, Fastify, NestJS, and custom Node.js servers.
- Provides retry timing and limiter state utilities for handling HTTP 429 responses and debugging.

ACHIEVEMENTS

- Solved 500+ DSA problems on LeetCode and 300+ algorithmic challenges on GeeksforGeeks, demonstrating consistent problem-solving ability.
- Earned a Gold Badge in SQL on HackerRank, reflecting strong proficiency in relational databases and query optimization.

EDUCATION

B.Tech in Computer Science & Engineering (2019 – 2023)

Punjabi University, Patiala | CGPA: 8.26 / 10
